

Privacy Policy

At aiPlato, protecting the privacy of our users—students, instructors, and institutions—is a top priority. This privacy policy outlines how aiPlato handles sensitive educational information, with a focus on transparency, data protection, and full compliance with the Family Educational Rights and Privacy Act (FERPA) and other relevant regulations.

About aiPlato

aiPlato is an educational technology platform that offers AI-enhanced tools for solving and analyzing academic problems, administering assignments, and providing intelligent feedback. As part of these services, aiPlato may handle personal and academic data, including student submissions, instructor feedback, and performance metrics.

We are committed to ensuring that any data handled within the platform is used exclusively to support educational goals and never for unauthorized purposes.

Secure System Design

aiPlato operates on a secure infrastructure. All user interactions, data transfers, and authentication processes are encrypted using SSL/TLS protocols. Our platform URLs use the “https” protocol to ensure secure communication at all times. Our security certificates are issued by trusted Certificate Authorities and are regularly reviewed and maintained.

FERPA Compliance

- aiPlato will not violate the privacy rights of any user under the Family Educational Rights and Privacy Act (FERPA) (20 U.S.C. § 1232g; 34 CFR Part 99). FERPA is a federal law that protects the privacy of student education records. [Please click here to read our FERPA Policy](#)
- As a technology provider to educational institutions, aiPlato may be designated as a “school official” with a “legitimate educational interest” under FERPA. In this role, aiPlato handles data only as instructed by the educational institution and for educational purposes only.

Data Usage and Restrictions

- aiPlato will never sell, rent, or disclose student, instructor, or institutional data to third parties. Data collected or processed by aiPlato will not be used for marketing purposes.
- All data is used exclusively for:
 - Delivering educational services and grading
 - Supporting learning outcomes and system performance
 - Providing customer support when requested

Data Storage and Anonymization

- To facilitate features like reporting, analytics, and instructor-grade dashboards, aiPlato must store user information including names, emails, and performance metrics. All sensitive data is stored securely, and students are assigned a **Unique Identifier (UID)** to decouple grades from directly identifiable information in backend systems.
- Administrators and engineers may analyze anonymized or pseudonymized data to monitor system health, troubleshoot issues, and improve features. However, regular operations do **not** involve viewing personally identifiable academic data.

Access to Student Information

- aiPlato staff do not access individual student data unless explicitly requested by the instructor of record or the student. Our support team has permission to log into instructor or student accounts only for technical support and troubleshooting purposes.
- In the case of suspected academic misconduct, instructors may request access to detailed activity logs, which include action time stamps and behavior patterns for enrolled students. These logs are accessible only to the course's instructor of record.
- A student may also request access to their own grade data and usage logs. Instructors and students may request this information through authenticated support channels.

Your Rights and Our Responsibilities

aiPlato is committed to:

- Upholding the rights of students and educators under FERPA
- Protecting all user data through technical, administrative, and policy safeguards
- Providing access to personal data upon verified request
- Not changing how user data is used without providing prior notice and obtaining necessary consent
